

Project cooperation and completion jointly between Transmil Spain and Kingfisher Freight South Africa

Project consisted of the movement on a door to door basis from Suppliers premises Spain , via the ports of Gijon Spain and Durban South Africa to site at the new King Shaka International Airport currently under construction outside the port city of Durban . The project consisted of some 110 pieces of break bulk cargo , with a weight 335430 kg and 3982 cum of freight ! From start to finish the project required a fully hands on approach by the two companies ensuring the smooth loading , discharge , abnormal transportation rigging and customs clearing culminating of the installation on site by the clients engineers as evidenced in the aerial photo of the new airport.

Once again dedication and teamwork by the two members of the association resulted in the satisfactory completion of a major developmental investment in South Africa.
